

Open House on Saturday, October 1st for Garofalo Contractors, and DAG Mobile Aggregate Recycling, in Lynduhurst, New Jersey

Garofalo Contractors, and DAG Mobile Aggregate Recycling, Lynduhurst, New Jersey, hosted an open house Saturday, October 1st to demonstrate the Rubble Master RM80 recycler and highlight their new shop.

Gerald Hanisch, HMI Engineering, Austria, designer and manufacturer of the Rubblemaster and Stephane Guerchon, Rubble Master North American Manager, were on hand to answer questions and aid in the demonstration.

Ronnie Garofalo started Garofalo Contractors twenty-seven years ago doing small residential jobs. While the residential work is still an important part of their business, they have grown doing larger site jobs, including demolition, drainage,

and paving, all with very little sub-contracting. The company now employs 12 full time and three part time employees, and has gone from renting equipment as needed to owning over 13 pieces of heavy equipment as well as 11 trucks and trailers.

Garofalo looked at the loss of time, money and manpower with fees to dump stone, and trips to pick up stone, and time spent sitting in metropolitan traffic. After assessing the situation, he decided to purchase a crusher. After looking at many crushers at Con Expo, Garofalo contacted Jack Moninger, president of Construction & Industrial Equipment Corporation, Lodi, NJ, to tell him they were interested in the Rubble Master. Moninger says "the machine creates usable product out of disposable material." The decision was made after seeing the Rubble Master in action in Canada. The Rubble Master RM80 was ordered and shipped from Austria.

Garofalo states "now we can process all our own concrete, asphalt, brick, block and rock to make usable product without leaving the job site. It saves us about 60 percent of the cost of dumping, trucking and picking up stone." The Rubble Master can be loaded and unloaded and working in 15 minutes. No oversized permits are required. The machine features low noise level and high production.

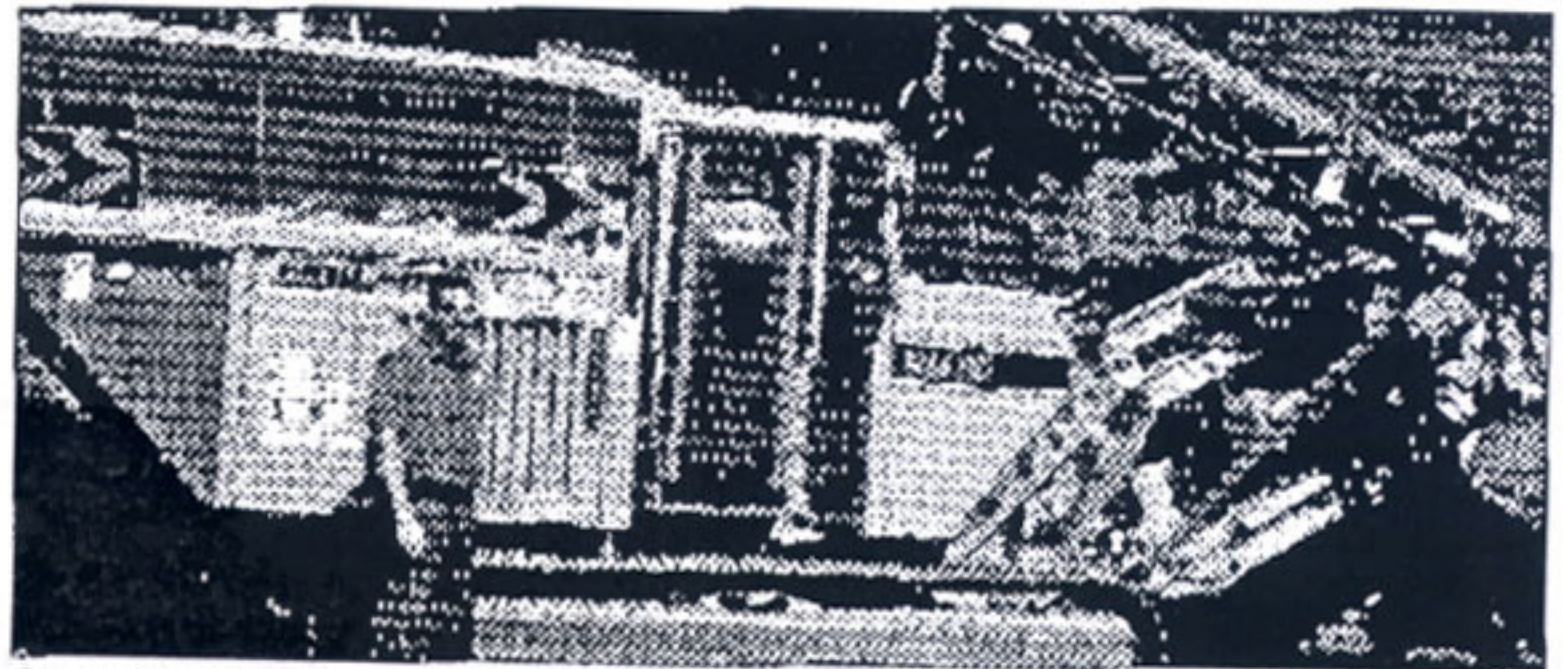

Garofalo started DAG Mobile Aggregate Recycling to do contract crushing on customer's site. Up and crushing in 15 minutes. DAG can produce approximately 165 tons of product per hour from asphalt, rock, brick and block (no problem with rebar). For more information, contact DAG Mobile Aggregate Recycling at 201-438-6858 (ph). For more information on Construction & Industrial Equipment Corporation, contact Jack Moninger at 201-845-6800.
